FOR IMMEDIATE RELEASE

VisiPlex, Inc. introduces a new series of **Wireless Alphanumeric LED Displays**
Instant notification during emergency and non-emergency situations.

Vernon Hills, Ill., September, 2007 — VisiPlex, Inc. introduces a new series of wireless alphanumeric LED displays that provide easy message and time viewing to accommodate a wide variety of applications such as public text messaging, silent alerts and time display.

The wireless alphanumeric LED displays include the ability to wirelessly receive dispatched alphanumeric text messages as a result of a preprogrammed event or a message that was generated from a wireless control center, PC, alarm panel or a network client, and display them in one to four (1-4) lines (model dependent). These units also have the ability to be a member of up to six (6) zones, with a built-in real time clock and full over-the-air wireless programmability.

Some unique features of the new LED display series:

- **Wireless time synchronization**
- **Secure reception mode to ignore information from unauthorized systems**
- **Built-in power backup option for power outage situations**
- **Easy installation and viewing angle adjustment**
- **Built-in coded RF receiver for individual/group messaging and alerts**
- **Wide selection of sizes for indoor and outdoor alphanumeric message display**

The wireless alphanumeric LED displays are in high demand as a receiver option for the AlertWave mass notification system and are ideal for college campuses, government facilities, city municipalities, counties, military bases, schools, commercial plants, transportation hubs and industrial complexes, when you have a great need to be able to communicate with the masses in the event of an emergency.
